

468 catalogued security invariants
(clustered data-first, no top-down scheme)

```
graph TD; A["468 catalogued security invariants<br/>(clustered data-first, no top-down scheme)"] --> B["Exit-time sensitive-register /<br/>state residue"]; A --> C["Stack-clash frame-size<br/>truncation"]; A --> D["RISC-V large-address<br/>materialization"]; B --> E["fast / exceptional exit<br/>bypasses register clearing"]; C --> F["integer narrowing flips<br/>frame size negative;<br/>probe loop skipped"]; D --> G["unintended sign extension<br/>while splitting a large<br/>address/offset"];
```

Exit-time sensitive-register /
state residue

fast / exceptional exit
bypasses register clearing

Stack-clash frame-size
truncation

integer narrowing flips
frame size negative;
probe loop skipped

RISC-V large-address
materialization

unintended sign extension
while splitting a large
address/offset
