

Orchestrator locks one invariant-checker pair
+ applicable ISAs + budget

assigned target

Generator agent
seed for the locked invariant only

seed only

Deterministic spine
routing → build → coverage → static / dynamic checker
→ four-state verdict + evidence

verdict

FAIL + deterministic evidence?

yes

PASS / NA / ERROR
(Error retained as diagnostic)

Minimizer + C-Reduce
reduce → rebuild → same-checker revalidate

Feedback agent
write coverage/verdict guidance → next round

append deterministic state

guidance

persist

reduction / recheck

fixed point + same-checker FAIL

Continue locked target; then next pair

Revalidated minimized PoC
→ human review

Versioned blackboard
append target, seeds, coverage, verdict/evidence,
guidance, reduction, and revalidation

next round
